                                                                                                                                                                                                                                                                                                                                                                                          invention describes novel human aspartic proteases and also ESTS from human cDNA libraries having partial DNA sequences which encodes an aspartic protease. Compounds which inhibit aspartic protease, especially antibodies can be used in therapy where needed. The protease can also be used in therapy where needed. The protease can also be are the processing of endothelin and pro-opiomelanocortin prohormones. They may also be involved in the processing of serum amyloid A protein
                                                                                                                                                                                                                                                                                                                                                                                   The present

                                                                                                                                                                                                                                          ₽
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is that of a mouse haematopoietic stem cell (HSC) specific protein. It is an example of claimed HSC-specific proteins (see AAY29176-93) predicted from novel isolated HSC-specific proteins (see AAY29176-93) predicted from novel isolated HSC-specific nucleic acids (see AAX294077-131). The HSCs are especially primitive HSCs (PHSCs) such as umbilical cord cells, bone marrow cells and foetal liver cells. The encoded proteins are growth factors, transcription factors splicing factors, transport proteins, translation factors or replication factors that modulate HSC activity, especially differentiation or replication. The invention provides claimed methods: of or identifying PHSC-specific nucleic acids, for generating a stem cell/progenitor cell from PHSCs; for identifying the presence in a sample of a compound that modulates HSC activity; for using such a compound to treat an immune system condition, especially leukaemia; for introducing exogenous nucleic acid into a HSC; and for ex vivo expansion of HSCs. Also claimed are coverors, host cells, and an antibody that specifically binds a an HSC-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 59 NPSFVPLSKFMNTQYFGTIGLGTPPQNFTVVFDTGSSNLWVPSTRCHFFSLACWFHHRFN 118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     183
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  243

(HUMA-) HUMAN GENOME SCI INC

WPI; 2001-465566/50. N-PSDB; AAS40936.

Novel polypeptides and polynucleotides useful for diagnosing, preventing, treating neural, immune system, muscular, reproductive, pulmonary, cardiovascular, renal, proliferative disorders and cancerous diseases.

Claim 11; SEQ ID NO 1062; 1180pp; English

The present invention relates to the isolation of novel human enzyme polypeptides, and the CDNA (AAS40785, AAS41684) and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of a wide range of disorders including hyperproliferative disorders (e.g. cancer), immunodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g. arthritis), neurological disorders (e.g. AIDS) autoimmune disorders (e.g. arthritis), intilammatory disorders (e.g. asthma), cardiovascular disorders (e.g. atheroselerosis), blood-related disorders (e.g. lamenoution disorders (e.g. influence). The polymucleotides of the invention can also be used in gene therapy. AAU22915-AAU23814 represent the novel human enzyme polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

The invention provides novel human secreted proteins and polynucleotides encoding them. The secreted proteins can be expressed by standard recombinant methodology. The secreted proteins and polynucleotides are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They can also be used in diagnosing a pathological condition. The antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked immunosorbent assays (ELISA). Disorders which are diagnosed or

17 isolated nucleic acid molecules encoding human secreted proteins, used to preventing, treating or ameliorating a medical condition.

hyperproliferative disorders e.g. neoplasms of the breast or liver, aradioascular disorders e.g. neoplasms of the breast or liver, earlionscular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and cordiar disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and pithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. The present sequence represents a human secreted protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        61 PGDKPIFVPLSNYRDVQYFGEIGLGTPPQNFTVAFDTGSSNLMVPSRRCHFFSVPCWLHH 120

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence

RESULT 1 **AAW**6206B

The present sequence represents the protein for lung tissue gene LU103. A method has been developed for detecting the presence of a target LU103 polynucleotide in a test sample, comprising: (a) contacting the sample with at least 1 LU103-specific polynucleotide, and (b) detecting the target LU103 polynucleotide in the test sample, where the LU103 polynucleotide has at least 50% identity to the 269, 263, 225, 507 or 519 bp nucleic acid sequence given in AAV38066 to AAV38070. The methods and products of the present invention may be used to detect, diagnose, stage, monitor, prognose, prevent, treat or determine the predisposition diseases and conditions of the lung, e.g. lung cancer Iung tissue derived polynucleotide LV103 - useful to detect, diagnose, stage, monitor, prognose, prevent, treat or determine pre-disposition to lung disease, e.g. lung cancer. The LSG has high level of tissue specificity for lungs and is overexpressed in cancerous tissues. The sequence serves as diagnostic marker for detecting, monitoring, staging and prognosticating lung cancer. The diagnosis involves comparing levels of LSG in samples obtained from patient and normal control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A rew method for diagnosing, monitoring and staging lung cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human signal peptide containing protein HSPP-66 SEQ ID NO:66.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Length 93;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The 507 base pair sequence of a LU103 specific polynucleotide was derived from a consensus of the isolated sequences from clones 1235095, 1235531 and 1379417. This sequence was then scanned for open reading frames. An ORF was found and this polypeptide was produced. The polynucleotides and methods are useful for detecting, diagnosing, staging, monitoring or predicting diseases and conditions of the lung, such as lung cancer. The polynucleotides may be used to produce probes for use in fluorescent in situ hybridization (FISH) technology to perform chromosomal analysis and identify cancer specific alterations such as deletions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAZ98109 to AAZ98242 encode AAY87224 to AAY87357 which represent the human signal peptide-containing proteins HSPP-1 to HSPP-134. HSPPs have human signal peptide-containing proteins HSPP-1 to HSPP-134. HSPPs have anticancer, anti-inflammatory, antimicrobial, nootropic, heptotoropic, neuroprotective, cardiovascular and antiasthmatic activities, and can be used to treat or prevent disorders associated with decreased activity or function of HSPP. Such diseases include cell proliferation cortivity or function of HSPP. Such diseases include cell proliferation (including cancer), inflammation, cardiovascular, neurological, reproductive or developmental disorders, (e.g. arteriosclerosis, cirrhosis, psoriasis, acquired immune deficiency syndrome, anaemia, asthma, crohn's disease, microbial or other infections, congestive or ischaemic heart disease, alzheimer's Parkinson's or Huntington's curcleic acids can be used for the recombinant production of HSPP, for detecting HSPP in standard hybridisation and amplification assays (for detecting HSPP in standard hybridisation and amplification assays (for diagnosis and monitoring), in gene therapy, as antisenses, criming corristions, and for chromosomal mapping HSPP are also used to raise specific antibodies (Ab) and to screen for agonists and antagonists or corribated disparse (in usual immunoasava) as therapautic, antamoniate in muminal immunoasava) as therapautice, antamoniate in muminal immunoasava) as therapautice, in manitor, HSPP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -related diseases (in usual immunoassays), as therapeutic antagonists, in competitive drug screens, and for purification of HSPP from natural

                                                                                           10-MAR-1998
Sequences AAU29024-AAU29328 represent PRO polypeptides of the invention.

The PRO polypeptides and their associated nucleic acids can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of cells from the animal and a control sample of normal cells, whereby a higher level of and a control sample of normal cells, whereby a higher level of mammal include dogs, cats, cattle, horses, sheep, pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNF) alpha release from human blood, when contacted with it. A specific polypeptide can be used to stimulate the proliferation or differentiation of chondrocyte cells. The PRO proteins can be used to determine the presence of tumours and also susceptibility to tumour development, particularly adrenal, lung, colon, breast, prostate, rectal, cervical, or liver tumours, in mammalian subjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders
 presence of tumors, such as prostate and breast tumors, in mammals and to screen for modulators of the compounds.
                                                                                                                                                                                                                                                                                                                                                                               1 MKLVTIFLLVTISLCSYSATAFLINKVPLPVDKLAPLPLDNILPFMDPLKLLLKTLGISV 60

The present invention provides the human and murine uteroglobin related protein 1 (UGRP1) promoters. The sequences can be used in the diagnosis of and prediction of predisposition to respiratory disorders such as asthma. The present sequence is a protein sequence shown in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 MKLVTIFLLVTISLCSYSATAFLINKVPLPVDKLAPLPLDNILPFMDPLKLLLKTLGISV
